## DETAILED ACTION

### *Election/Restrictions*

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-4, drawn to an image processing apparatus for detecting a motion vector of a target pixel from the position of the target pixel and the centroid, classified in class 382, subclass 236.
- II. Claims 5-8, drawn to an image processing apparatus for detecting a motion vector that is one of the vectors closest to an earlier motion vector of the target pixel in time, classified in class 382, subclass 236.
- III. Claims 9-14, drawn to an image processing apparatus for detecting a motion vector from the position of the target pixel and the position of one of the candidate pixels when a minimum of the differences is determined, classified in class 382, subclass 236.

Inventions I, II, and III are directed to related motion vector devices. The related inventions are distinct if the (1) the inventions as claimed are either not capable of use together or can have a materially different design, mode of operation, function, or effect; (2) the inventions do not overlap in scope, i.e., are mutually exclusive; and (3) the inventions as claimed are not obvious variants. See MPEP § 806.05(j). In the instant case, the inventions as claimed each detect a motion vector in a mutually exclusive way. Furthermore, the inventions as claimed do not encompass overlapping subject matter and there is nothing of record to show them to be obvious variants.
